

Beckery's

React + Tailwind Build Plan

A complete development guide for Becky Dawson's pre-order bakery website — covering project structure, component breakdown, images, icons, Web3Forms integration, and styling tokens — so you can go from design to deployed site with no guesswork.

React + Vite	Tailwind CSS v3	Web3Forms	Lucide Icons
--------------	-----------------	-----------	--------------

Contents

1	Project setup & folder structure
2	Design tokens (colors, fonts, spacing)
3	Sections breakdown & components
4	Images to download
5	Icons to download (Lucide)
6	Web3Forms — contact & custom cake form
7	Build order & tips

1 — Project Setup & Folder Structure

Bootstrap the project with Vite:

```
npm create vite@latest becerys -- --template react
```

```
npm install
```

```
npm install -D tailwindcss postcss autoprefixer
```

```
npm run tailwindcss init -p
```

```
npm install lucide-react
```

Recommended folder structure:

Path	Purpose
src/components/	All reusable UI components
src/sections/	Full-page sections (Hero, Menu, etc.)
src/assets/images/	All downloaded product photos
src/assets/icons/	Any custom SVG icons (if needed)
src/data/menu.js	Menu items, prices, flavors as a JS array
src/data/faqs.js	FAQ questions and answers
public/	favicon, og:image, robots.txt

tailwind.config.js — add your custom theme tokens here:

```
content: ['./index.html', './src/**/*.{js,jsx}'], theme: { extend: { colors: { cream: '#F8F1E3', cocoa: '#2D170F', gold: '#B98935', warm: '#7A5F52' }, fontFamily: { serif: ['Playfair Display', 'Georgia', 'serif'], sans: ['DM Sans', 'sans-serif'] } } }
```

Add the two Google Fonts to your index.html : Playfair Display (headlines) and DM Sans (body text). Both are free on fonts.google.com.

2 — Design Tokens

Token	Hex	Use it for
cream	#F8F1E3	Page background, card fills
cocoa	#2D170F	Primary headings, dark text
gold	#B98935	CTA buttons, accent borders, step numbers
warm	#7A5F52	Body copy, secondary text
blush	#E9D8BC	Dividers, table borders, subtle backgrounds
light	#FFF9EE	Section alternates, footer background

Typography

Headings — font-serif (Playfair Display), font-normal or italic. Body — font-sans (DM Sans). Buttons — font-sans font-bold uppercase tracking-wide.

Spacing rhythm: use multiples of 4px — Tailwind's p-4, p-8, p-16, gap-6, etc.

3 — Sections Breakdown & Components

Navbar

File	components/Navbar.jsx
Purpose	Sticky top bar with logo (Beckery's italic serif), nav links (Menu, Custom Cakes, How It Works, Contact), and a gold Pre-order CTA button. Collapses to hamburger on mobile.
Sub-components	Logo.jsx, NavLinks.jsx, HamburgerMenu.jsx

Hero

File	sections/Hero.jsx
Purpose	Full-width section with headline 'Fresh bakes made for sweeter days', subtext, two buttons (Pre-order now / View menu), and a hero image of banana bread or cupcakes. A small badge reads 'Pick-up and delivery available'.
Sub-components	HeroBadge.jsx, CTAButton.jsx

Menu Highlights

File	sections/MenuHighlights.jsx
Purpose	4-card grid: Banana Bread, Decorated Cakes, Cupcakes, Shortbread Cookies. Each card has a product photo, name, description, price, and a Pre-order button.
Sub-components	MenuCard.jsx

Custom Cake Inquiry

File	sections/CustomCake.jsx
Purpose	Form section (Web3Forms) with fields: name, phone, cake size, event date, flavor, theme/description, pickup or delivery toggle, budget. Submit sends an email to Becky.
Sub-components	CakeForm.jsx, FormField.jsx

How It Works

File	sections/HowItWorks.jsx
Purpose	4 numbered steps in a horizontal row (desktop) / vertical stack (mobile): Choose items → Confirm by phone → Pay → Collect. Each step has a gold circle number, bold title, short caption.

Sub-components	StepItem.jsx
-----------------------	--------------

Testimonials

File	sections/Testimonials.jsx
Purpose	Scrollable row of customer quote cards. Each has a quote, customer name, and star rating. Optional section — can be added later.
Sub-components	TestimonialCard.jsx

Contact & FAQ

File	sections/Contact.jsx
Purpose	Two-column layout: left has phone numbers, Instagram handle, location (Madina UN), and a simple Web3Forms contact form. Right has accordion FAQ items (preorder timing, delivery, payment, cake sizing).
Sub-components	FAQAccordion.jsx, FAQItem.jsx, ContactForm.jsx

Footer

File	components/Footer.jsx
Purpose	Dark cocoa background with Beckery's logo, nav links, Instagram link, phone numbers, and a short tagline.

4 — Images to Download

All images should be warm, natural, close-crop food photography on light backgrounds. Avoid over-edited or overly saturated stock. Recommended sources: Unsplash (unsplash.com), Pexels (pexels.com) — both free. Search terms are listed below.

Image slot	Where used	Search term (Unsplash/Pexels)	Save as
Hero background	Hero section	banana bread homemade warm	hero-banana-bread.jpg
Banana Bread card	Menu Highlights	sliced banana bread loaf close up	menu-banana-bread.jpg
Decorated Cake card	Menu Highlights	decorated birthday cake pastel	menu-cake.jpg
Cupcakes card	Menu Highlights	chocolate cupcakes box bakery	menu-cupcakes.jpg
Shortbread card	Menu Highlights	shortbread cookies gift bag	menu-cookies.jpg
Custom Cake section	Custom Cake form bg	cake decorating frosting detail	custom-cake-bg.jpg
OG / Social image	public/og-image.jpg	bakery flat lay baked goods	og-image.jpg
Favicon source	public/favicon	Use logo or a small bread emoji icon	favicon.png

Tips: download at 1200px+ wide. Use WebP format if possible for faster loading. Keep file sizes under 200KB by compressing at squoosh.app.

5 — Icons to Download (Lucide React)

Use lucide-react — you already installed it. Import individual icons like:

```
import { Phone, MapPin, Instagram, ShoppingBag } from 'lucide-react'
```

No manual downloads needed for Lucide — it's all in the npm package. Here are the exact icon names to use per section:

Icon name (Lucide)	Where to use it
Phone	Contact section, phone number display, CTA bar
MapPin	Location: Madina UN address
Instagram	Instagram @beckerys_ link in footer and contact
ShoppingBag	Pre-order CTA button, nav button
ChevronDown	FAQ accordion toggle arrow
CheckCircle	Order confirmation success message (Web3Forms)
Clock	Preorder timing note / FAQ item
Truck	Delivery option label in cake form
Star	Star rating in testimonial cards
Menu	Hamburger menu icon on mobile navbar
X	Close icon for mobile menu drawer
ArrowRight	'View menu' secondary CTA button
Cake	Custom cake section heading icon

All icons accept className and size props:

6 — Web3Forms Integration

Setup (one-time)

1. Go to web3forms.com and enter Becky's email to get a free access key.
2. Store it in a .env file:

```
VITE_WEB3FORMS_KEY=your_access_key_here
```

Contact Form (ContactForm.jsx)

Simple form: Name, Phone/WhatsApp, Message. On submit, POST to <https://api.web3forms.com/submit>. Show a success message using CheckCircle icon on 200 response.

```
const res = await fetch('https://api.web3forms.com/submit', {
  method: 'POST',
  headers: { 'Content-Type': 'application/json', 'Accept': 'application/json' },
  body: JSON.stringify({
    access_key: import.meta.env.VITE_WEB3FORMS_KEY,
    name: formData.name,
    phone: formData.phone,
    message: formData.message,
  })
})
```

Custom Cake Inquiry Form (CakeForm.jsx)

Same fetch pattern. Fields to include in the message body:

Field	Input type	Notes
Name	text	Required
Phone/WhatsApp	tel	Required — Becky confirms over WhatsApp
Cake size	select	Bento / 6 inch / 8 inch / Cupcake bundle
Event date	date	Required — helps Becky plan ahead
Flavor	select	Chocolate / Red velvet / Vanilla / Custom
Theme/Description	textarea	Describe design, colors, writing, toppers
Pickup or Delivery	radio/toggle	Toggle switch, Tailwind styled
Budget (GHS)	number	Optional but helpful

Web3Forms free plan allows 250 submissions/month — more than enough for a small bakery. No backend or server needed.

7 — Build Order & Tips

#	Phase	What to do
1	Project init	Run Vite + Tailwind setup, configure tailwind.config.js with custom tokens, add Google Fonts to index.html
2	Design system	Create a Colors.jsx or tokens.js reference file. Test colors in a scratch component first.
3	Navbar + Footer	Build these first — they wrap everything and confirm your layout shell.
4	Hero section	Get the big visual right. Use a placeholder image initially, swap in the real photo later.
5	Menu Highlights	Build MenuCard.jsx as a reusable component. Map over src/data/menu.js to render all 4 cards.
6	How It Works	Pure layout + styling — no data fetching. Quick win.
7	Custom Cake form	Wire up Web3Forms. Test with a real email first before styling.
8	Contact + FAQ	Add ContactForm.jsx (Web3Forms). Build FAQAccordion with useState for open/close toggle.
9	Responsiveness	Go through each section with browser devtools at 375px, 768px, 1280px. Fix with Tailwind sm: md: lg: prefixes.
10	Polish & deploy	Compress images at squoosh.app. Add meta tags (og:title, og:image) to index.html. Deploy to Vercel or Netlify.

Quick tips

- Use className='font-serif italic' for all Beckery's logo text across components.
- Wrap the pre-order phone CTA in an anchor tag with href='tel:0557443430' so it dials on mobile.
- Use Tailwind's group and group-hover: for card hover effects (e.g. image zoom on MenuCard).
- Add a loading state to both Web3Forms buttons so users know the form submitted.
- Store menu data in src/data/menu.js as an array of objects — makes it easy to update prices later.
- The mobile design from the SVG uses a vertical single-column stack. Use flex-col and gap-4 as defaults, then override with md:flex-row for desktop.
